

Multi Species Grazing

Ann Wells, DVM
Springpond Holistic Animal Health
Prairie Grove AR

Why a different species?

- ⑩ Land base and size
- ⑩ Additional enterprise
- ⑩ Raise weed eaters and fertilizers instead of buying weed killers and fertilizer
- ⑩ Producer likes them

Feeding Preferences

**GRAZING HEIGHT,
FROM SOIL SURFACE**

LOWER ...TO HIGHER

Horse \geq Sheep $>$ Cattle $>$ Goat

Stocking Rate

- ⑩ Rule of thumb
 - 5 animals per one cow
- ⑩ Works for sheep
- ⑩ Goats
 - Brush control
 - Maintain browse 1-2 goats per acre
- ⑩ Overstocking major cause of health problems, especially internal parasites

10 Acre farm

1-3 ac/cow-calf unit

5 ewe-lamb units/cow-calf unit

2-5 doe-kid units/cow-calf unit

Goats are Harder to Raise than Sheep or Cattle

Why?

Diet preferences
Parasites

Sheep are easier

Land management issues with goats

- ⑩ Maintaining browse for years
- ⑩ Adjusting goats to eating grass
- ⑩ Providing nutritional needs mainly with forages

- ⑩ Each forage type will require different management and grazing pressure

Chemical composition of various plants browsed by goats (%)

Browse type	Crude protein	Neutral detergent fiber	Calcium	Phosphorous
<i>Multiflora rose</i>	18.8	34.5	0.99	0.32
<i>Honeysuckle</i>	12.8	34.5	1.21	0.30
<i>Brambles</i>	15.9	24.5	0.23	0.84
<i>Privet</i>	18.0	26.8	0.89	0.34
<i>Green briar</i>	17.0	39.5	0.60	0.18
<i>Kudzu leaves</i>	23.7			
<i>Trumpet creeper</i>	16.7	43.1	0.42	0.22

Browse species to monitor for goats

⑩ Desirable (Preferred)

⑩ Multiflora rose

⑩ Briars

⑩ Ragweed

⑩ Lambsquarter

⑩ Sericea

⑩ Honeysuckle

⑩ Kudzu

⑩ Privet

Note: some of these plants are invasive so planting may not be a good option

Browse species to monitor

⑩ Intermediate

- Ironweed
- Spiny amaranth
- Pigweed
- Buckbrush
- Curly dock
- Pokeweed
- Buttercup
- White clover
- Thistle
- Wingstem

Browse species to monitor

- ⑩ Undesirable
 - Horsenettle
 - Perilla mint
 - Bitter sneezeweed

Monitoring general trend concerning browse

⑩ Key species

- Monitor to determine upward or downward trend of browse condition
- Intermediate browsed species are good key species

⑩ Age class of browse

- One age class indicates downward trend in browse

⑩ Hedging

- Indicator of heavy recent browse
- 2+ yr of growth above hedge line indicates trend toward lighter browsing

⑩ Browse lines

- Forage is beyond reach of animals

⑩ Abundance of low preference forage species

- indicates key species is not competing with lower preference species.

Browse species to monitor

⑩ Intermediate

- Ironweed
- Spiny amaranth
- Pigweed
- Buckbrush
- Curly dock
- Pokeweed
- Buttercup
- White clover
- Thistle

Goat Husbandry – Relative to Grazing/Browsing

- ⑩ Goats are more selective foragers than cattle
- ⑩ Goats tend to prefer taller vegetation
- ⑩ Don't browse vegetation at all growth stages
- ⑩ Fence woods separate from pasture
- ⑩ Best to rotate off paddocks before goats graze
re-growth
- ⑩ Goats browse top down and thus, more uniformly
- ⑩ Concentrated tannins are natural de-wormers
- ⑩ medicinal pasture”

Sheep Husbandry – Relative to Grazing/Browsing

- ⑩ Sheep are less selective foragers than cattle
- ⑩ Sheep tend to prefer shorter vegetation
- ⑩ Sheep want to graze no matter how much vegetation
- ⑩ Sheep prefer forbs
- ⑩ Sheep will graze to the ground if allowed to do so
- ⑩ Sheep will graze rather than eat hay
- ⑩ Must allow pastures to rest
- ⑩ Concentrated tannins are natural de-wormers
- ⑩ “medicinal pasture”

Maximize intake

**Most efficient grazing for goats
and cattle is when the forage
height is 6-10 inches**

Maximize intake

**Most efficient grazing for sheep is
when the forage height is 4-6
inches**

Health concerns

- ⑩ Parasites are the main disease
- ⑩ Must have a management plan
- ⑩ Most dewormers are no longer effective
- ⑩ Don't forget about weather!
- ⑩ Predator control

Management strategies

- ⑩ Culling is important
- ⑩ Grazing species together vs separately
- ⑩ Deciding on marketing
- ⑩ When to breed

- Delaware Chickens
- Egg Layers
- Follow sheep
